# PROJECT OF THE MONTH | Warsaw branch of the Alior Bank [PL]

# 07 20

<b>PROJECT</b>	Warsaw branch of the Alior Bank [PL]
<b>COMPLETION</b>	December 2019
<b>ARCHITECTS</b>	Robert Majkut Design
<b>PRODUCTS</b>	<b>S4 rectangular metal panels</b> 0.6 mm thick galvanized sheet steel, dimension [LxW]: 1200 x 600 mm, powder-coated in RAL 9016, perforated in L6, backed with fleece [240 m <sup>2</sup> ]

Roughly 25,000 m<sup>2</sup> of classic metal ceiling in more than 150 bank branches: over the last few months, on a gradual basis, a large number of branches of the Polish universal bank Alior have been getting renovated or newly constructed, all at great expense. Products have been chosen primarily with an eye to their aesthetics and durability.

In December last year, the head office in Warsaw was one of the first to be completed. An appropriate ceiling solution has been supplied by durlum to all of its branches.

From the main foyer, throughout the corridors and waiting areas as well as the segregated meeting corners, the minimalist elegance and firm impression of durability of these rectangular metal panels blend seamlessly into the open, bright room concept. Powder-coated in white and lined with fleece to improve acoustics, the individual panels are hook-mounted in the system and are easy to remove – they can be removed at any time without the need for tools.

With these renovation measures, the Alior Bank has succeeded in implementing a stylish concept – the result is a subdued atmosphere, the perfect setting for communication and confidential exchanges.
