

# Eutin police service building

Eutin, Germany

## The Project

The new police buildings in the charming little town of Eutin transform the Police Academy in Schleswig-Holstein into a modern campus. The curved service building with canteen kitchen, dining hall and cafeteria is designed to cater for up to 1,200 police officers on a daily basis.

The spacious and comfortable dining hall is a really eye-catching feature, with seating for up to 300 police trainees and stand-by police officers. The POLYLAM vertical baffle system is powder-coated in white, complementing the daylight-flooded interior and contributing towards the open and bright feel of this interior space. The offset arrangement of the acoustically effective POLYLAM ceiling elements enhances this impression and creating a dynamic and free aesthetic for this space.

When needed, the harmoniously integrated OMEGA 63 lighting channel can be switched on to bathe this company restaurant in a pleasing light.
